

DollsVilla by Liliane

Designed for the Parents of Dolls

The DollsVilla is used as a research-observation tool for traumatized children at the Psychology Faculty of the Polish university SWPS. Anna Nowak Psychiatrist | Medical Director Terapia Dialog Warsaw: "We believe that conducting the international research-project 'DollsVilla and video-registration' may lead to increased efficacy of therapeutic work with children."

The DollsVilla by Liliane® is the worldwide unique child high design home on wheels for the children's most cherished dolls of 12 inches | 30 centimeter, and for their cars! These dolls fulfill an important role in teaching children about pleasure, attachment and trust.

Psychologist Kasia Stankiewicz | Netherlands: "The DollsVilla is an excellent channel for making contact with children; certainly with children who have difficulty expressing themselves verbally. The villa is used for many different problems: from attachment problems, abuse, and behavioural problems to neglect. Suitable for perception and treatment."

DollsVilla made in Germany with sustainable materials: birch plywood [transparent varnish] | solid beech wood | perforated stainless steel roofs | plexiglass | mirror. With a car ramp | metal wheels [with brakes] | swing | three drawers | wardrobe rod 60 cm | two spiral staircases with steps that can rotate 360 degrees.

Designer Liliane Limpens: "If the children's children live in a sustainable, safe house with lots of light, this contributes to the resilience and happiness of their young parents. It is an honour for me to have designed a piece of play furniture for children, as children can be found at the start of life. If children aren't given a good start in life...the rest of their life will be affected. That's why I consider it very important to contribute to the lives of children."

With a complete design interior in plywood, stainless steel, plexiglass, granite-look, aluminum: a kitchen | shower | three beds with cotton bed linen | desk with rotatable computer table | toilet with lockable lid | dining table | six chairs | bookcase annex dresser | sofa | wardrobe with mirror.

Astrid Lindgrens Children's Hospital Stockholm Sweden: "Seriously sick children, we observed, do not look at other people, but usually at the floor. For many years we had been looking for something that could stimulate contact between children. The DollsVilla by Liliane® is exactly what we needed."
